

PRINTING A CODE ON A PRODUCT

ABSTRACT

5 A method for printing is described. The method includes providing a printing
system for printing a code on a product moving in a direction. The code is
constructed from a plurality of pixels in a first data set indicating the positions of the
pixels and generates a corrected data set indicating the position that each pixel would
occupy if each pixel was moved at the velocity of the product until the pixel was
10 printed. The method also includes printing the code according to the corrected data
set.
